Children's and Young People's Mental Health and Wellbeing Profile

This profile has been developed to support the Mental Health Dementia and Neurology Intelligence Network's aim to improve the health of communities by making data and information accessible.

The Children and Young People's Mental Health and Wellbeing Profile presents all the local authority level indicators contained within the [Children and Young People's Mental Health and Wellbeing Profiling Tool](#).

The tool provides commissioners, service providers, clinicians, services users and their families with the means to benchmark their area against similar populations and gain intelligence about what works.

Indicators are presented under the headings Risk, Prevalence, Health, Social Care and Education. In the current absence of detailed data on treatment and outcome the tool focuses on those services that support children with, or vulnerable to, mental illness.

Note: this profile presents local authority geography indicators only, this accounts for 90% of indicators in the tool with only some health service and health finance missing. To see all indicators please view the Children and Young People's Mental Health and Wellbeing Profiling Tool.
